### General Description

These new solenoid operated poppet valves are used mainly for starting, stopping and controlling the direction of linear and rotary actuators or for use as a pilot valve. The gasket mounted types can also be used for controlling the pilot functions of cartridge valves to ISO 7368 (DIN 24342) (see catalog 2378).

All valves are of a "zero leakage design" which is the major design feature of poppet-type valves. The valves are available as either gasket mounted or cartridge insert type. The latter requires a housing having a purpose-formed recess (see recess hole drawing and special tool note).

### Advantages

- Zero internal leakage in closed position
- Fast consistent response times
- Cost-efficient high pressure capability
- Simple assembly and installation
- Fast and easy servicing

**Response Times**

Time taken from when signal is first applied at solenoid until armature completes its travel. Based on average conditions with warm solenoids at 95% rated voltage:

AC and DC energizing . . . . . 150 ms  
AC and DC\* de-energizing . . . . . 85 ms

\* *In pure switched circuit conditions devoid of the effects of any suppression diodes and full-wave rectifiers.*

**Hydraulic Fluids**

All valves can be used with anti-wear hydraulic oils, water-in-oil emulsions and water glycols. Add prefix "F3" to model designation when phosphate ester (not alkyl-based) or chlorinated hydrocarbons are to be used.

The valves are also suitable for use with high water-based fluids (95% water, 5% oil) up to 200 bar.

The extreme operating viscosity range is from 300 to 13 cSt (1460 to 70 SUS) but the recommended running range is 54 to 13 cSt (250 to 70 SUS).

For further information about fluids see catalog 920.

**Temperature Limits**

Ambient min. . . . . -20°C (-4°F)

Ambient max. . . . . +70°C (158°F)

Fluid temperature

	<b>Petroleum oil</b>	<b>Water-containing</b>
Min.	-20°C (-4°F)	+10°C (+50°F)
Max.*	+70°C (+158°F)	+54°C (+130°F)

\* *To obtain optimum service life from both fluid and hydraulic system, 65°C (150°F) normally is the maximum temperature except for water-containing fluids.*

For synthetic fluids consult manufacturer and your Vickers representative where limits are outside those for petroleum oil.

Whatever the actual temperature range, ensure that viscosities stay within the limits specified in the "Hydraulic Fluids" section.

**Contamination Control Requirements**

Recommendations on contamination control methods and the selection of products to control fluid condition are included in Vickers publication 9132 or 561, "Vickers Guide to Systemic Contamination Control". The book also includes information on the Vickers concept of "ProActive Maintenance". The following recommendations are based on ISO cleanliness levels at 2 µm, 5 µm and 15 µm. For products in this catalog the recommended levels are:

Up to 210 bar (3050 psi) . . . . . 20/18/15

Above 210 bar (3050 psi) . . . . . 19/17/14
